Cardiovascular Health & Patient Guide

Welcome to Cardiology

Our cardiology department provides state-of-the-art care for heart-related conditions, including hypertension, coronary artery disease, arrhythmias, and heart failure. We focus on both preventive heart care and active diagnostic treatment.

Preparing for Your Visit

Please bring a complete list of your current medications, recent blood test results, and a log of symptoms you have been experiencing. Do not consume caffeine or perform strenuous exercise 4 hours prior to a scheduled stress test.

Heart-Healthy Habits

To maintain cardiovascular health, aim for at least 150 minutes of moderate-intensity aerobic exercise per week. Follow a diet low in sodium and saturated fats, rich in vegetables, fruits, whole grains, and lean proteins. Quit smoking and limit alcohol intake.

Common Diagnostic Tests

Electrocardiogram (ECG/EKG) measures electrical activity of the heart to identify arrhythmias. Echocardiogram uses ultrasound waves to produce live images of heart chambers and valves. Stress test monitors heart function under physical exertion on a treadmill.
