Pediatric Care & Child Wellness FAQ

General Child Wellness

Regular pediatric check-ups are essential for tracking growth, development, and administering standard vaccinations. Scheduled wellness visits occur at 1, 2, 4, 6, 9, 12, 15, and 18 months, and annually thereafter. Feel free to discuss development questions with your pediatrician.

Immunization Schedule

Standard immunizations include DTaP, MMR, Varicella, Hepatitis B, and Hib. Flu shots are recommended annually for children 6 months and older. If you miss a scheduled vaccine, consult your pediatrician for a catch-up plan to ensure full protection.

Managing Common Fevers

A fever is defined as a temperature of 100.4F (38C) or higher. For infants under 3 months, contact a doctor immediately for any fever. For older children, ensure they stay hydrated, and use acetaminophen or ibuprofen as directed. Never give aspirin to children due to the risk of Reye's syndrome.

Pediatric Emergencies

Seek emergency care if your child has difficulty breathing, severe dehydration (no wet diapers for 8+ hours), extreme lethargy, or a fever accompanied by a stiff neck or purple rash. Trust your parental instincts when deciding to visit the ER.
